Summary

Software engineer with 3 years of experience specializing in Flutter, building production applications and shipping releases to the App Store and Google Play. Recent work includes architecting custom Backend-for-Frontend endpoints in Spring Boot and refactoring legacy codebases under Clean Architecture.

Technical Skills

Mobile & Frontend: Flutter, Clean Architecture, Riverpod, GoRouter, RESTful APIs, BFF Integration, Unit/Widget/Integration Testing, Mockito
Core Languages: Dart, Python, Java, SQL
DevOps, Cloud & Release: Docker, GitHub Actions (CI/CD), Firebase (Auth, Crashlytics, Remote Config), Google Play Console, TestFlight, Git
Backend & Data Engineering: Spring Boot, FastAPI, PostgreSQL

Professional Experience

Software Engineer Sep 2025 – Present
Reality Sports *Tunis, Tunisia*

- Architected custom Backend-for-Frontend (BFF) endpoints in Spring Boot to streamline mobile API integration, reducing integration time by 40% and unblocking parallel development cycles.
- Shipped a full-stack sports management platform to the App Store and Google Play Store, building 10+ data-driven Flutter screens and integrating 15+ RESTful backend services for real-time data synchronization.
- Spearheaded the legacy codebase refactor to Riverpod and GoRouter under Clean Architecture, eliminating critical bugs across core user flows and reducing overall app binary size by 15%.

AI Engineer Intern (Graduation Project) Feb 2025 – Aug 2025
Nexaminds *Tunis, Tunisia*

- Designed a privacy-first resume parsing and candidate scoring engine using a locally hosted Mistral 7B LLM, replacing commercial third-party APIs to guarantee data confidentiality and cut operational costs.

Mobile Developer (Part-time) Oct 2022 – Feb 2025
Nexaminds (Lovester) *Tunis, Tunisia / UAE (Remote)*

- Engineered the complete Flutter frontend for the "Lovester" dating application (lovester.net), achieving fluid 60fps user interfaces and complex custom animations across 25+ unique screens.
- Transitioned the application from MVVM to a modular Clean Architecture focused on domain entities and unidirectional data flow, improving scalability for future development.

Mobile Engineer Intern Jul 2024 – Nov 2024
Orange Digital Center *Tunis, Tunisia*

- Built the end-to-end Flutter frontend for "Voltisense," an IoT-connected household energy monitoring application that won 2nd Place out of 20+ engineering teams in the Orange Summer Challenge.

Certifications

Data Engineer (Issued by: DataCamp, ID: DE0015568725673)
Data Engineering Specialization (Issued by: DeepLearning.AI, ID: 8154W4WB0W5O)

Education

National Institute of Applied Sciences and Technologies (INSAT) Sep 2020 – June 2025
National Engineering Degree in Software Engineering *Tunis, Tunisia*

Volunteering & Leadership

Flutter Instructor 2022 – Present
INSAT Android Club

- Taught Flutter development and led UI/UX design workshops for students.
