Summary

Software engineer with 3 years of experience in mobile and backend development, specializing in cross-platform applications and scalable API integrations. Recent work includes building production Flutter applications, refactoring legacy codebases to Riverpod, and developing a privacy-first resume parsing engine.

Technical Skills

Mobile & Frontend: Flutter, Clean Architecture, Riverpod, Provider, GetX, GoRouter, RESTful APIs, Unit/Widget/Integration Testing
Core Languages: Dart, Python, Java, SQL, Bash
DevOps, Cloud & Release: Docker, Git, GitHub Actions (CI/CD), Firebase (Auth, Crashlytics, Remote Config), Google Play Console, TestFlight
Backend & Data Engineering: Spring Boot, FastAPI, PostgreSQL, MQTT

Professional Experience

Software Engineer Sep 2025 – Present
Reality Sports *Tunis, Tunisia*

- Shipped a full-stack sports management platform to the App Store and Google Play Store, building 10+ data-driven Flutter screens and integrating 15+ RESTful backend services for real-time data synchronization.
- Spearheaded the legacy codebase refactor to Riverpod and GoRouter under Clean Architecture, eliminating critical bugs across core user flows and reducing overall app binary size by 15%.
- Architected custom Backend-for-Frontend (BFF) endpoints in Spring Boot to streamline mobile API integration, reducing integration time by 40% and unblocking parallel development cycles.
- Established a strict testing culture by writing comprehensive unit and widget tests with Mockito, achieving ∼80% code coverage.

AI Engineer Intern (Graduation Project) Feb 2025 – Aug 2025
Nexaminds *Tunis, Tunisia*

- Designed and shipped a modular FastAPI backend exposing endpoints for resume parsing, job description matching, and automated interview orchestration.
- Containerized the complete multi-model AI system (Mistral 7B, Whisper STT, gTTS, FastAPI) using Docker, creating reproducible container images for local execution and production deployment.

Mobile Developer (Part-time) Oct 2022 – Feb 2025
Nexaminds (Lovester) *Tunis, Tunisia / UAE (Remote)*

- Engineered the complete Flutter frontend for the "Lovester" dating application (lovester.net), achieving fluid 60fps user interfaces and complex custom animations across 25+ unique screens.
- Led the architectural state management migration from Provider to Riverpod, improving code maintainability and accelerating onboarding for new feature development.
- Established the foundational testing environment using Flutter's test framework, Mockito, Build Runner, and FakeAsync to execute unit, widget, and integration tests, catching regressions during development.

Mobile Engineer Intern Jul 2024 – Nov 2024
Orange Digital Center *Tunis, Tunisia*

- Built the end-to-end Flutter frontend for "Voltisense," an IoT-connected household energy monitoring application that won 2nd Place out of 20+ engineering teams in the Orange Summer Challenge.
- Engineered hardware pairing workflows and MQTT-based communication pipelines between IoT monitoring devices and the mobile app, streaming real-time energy consumption metrics to interactive graphs with sub-second latency.

Education

National Institute of Applied Sciences and Technologies (INSAT) Sep 2020 – June 2025
National Engineering Degree in Software Engineering *Tunis, Tunisia*
